Education

- University of Belgrade, School of Electrical Engineering, Master's degree in Software Engineering (10/2017 - 09/2019)
- University of Belgrade, School of Electrical Engineering, Bachelor's degree in Software Engineering (10/2013 - 09/2017)

Employment

Recognition: Credited in Apple's web server security acknowledgements (November 2025).

→ Oracle, Software Engineer (01/2022 - Present)

IC4 since 01/06/2024. Previously IC3 (01/01/2022 - 31/05/2024).

400+ merged pull requests across the Micronaut ecosystem since 2022.

- Implemented OpenTelemetry support for Micronaut HTTP and gRPC, extended JDBC/R2DBC instrumentation, and added Micrometer Observation and Prometheus PushGateway integrations.
- Built OCI logging, certificate and workload-identity integrations, plus AWS CloudWatch logging. Fixed OCI SDK retry scheduling that could block Netty event loops.
- Extended an internal Java service framework with raw metrics, HTTP/JVM instrumentation and request-ID propagation. Added Terraform reference deployments.
- Improved GraalPy-based Python/Java interoperability in Micronaut and Pyronaut, including async execution, dataclass introspection, pytest integration and native packaging.
- Developed Graal Development Kit application/Kubernetes templates and GitLab CI tooling for dependency updates, release validation, smoke tests and OCI-authenticated access.
- Authored Micronaut Guides with runnable examples, including Kubernetes on OCI OKE, CloudWatch metrics and OCI OpenTelemetry tracing, plus Python samples.

→ Seven Bridges Genomics, Penetration Tester (05/2021 - 12/2021)

→ Seven Bridges Genomics, Software Engineer (12/2017 - 05/2021)

- Built platform services in Java, Python and Go, including shared secrets management with HashiCorp Vault and MFA with recovery codes, email verification and TOTP.
- Improved OAuth2 SSO, split billing functionality into charging and pricing services, and built administrative API gateways and Go HTTP clients.
- Automated shutdown of idle AWS EC2 test environments and built a notification service for targeted and platform-wide messages.

→ Seven Bridges Genomics, Python Software Engineer Intern (03/2017 - 06/2017)

Built a Python user management service for registration and authentication, plus a frontend API gateway.

Technologies: Java, Python, Go, Micronaut, Netty, GraalVM, GraalPy, OpenTelemetry, Micrometer, OCI, AWS, Kubernetes, Docker, Terraform, Gradle, Maven, GitHub Actions, GitLab CI, PostgreSQL, MongoDB and HashiCorp Vault.

Languages: Serbian, English
