Nemanja Mikić

Senior Software Engineer · Backend, Platform & Cloud · Java, Python, Go · Remote-ready (CET)

Belgrade, Serbia · n0t_l3ss@outlook.com · linkedin.com/in/nrmikic · github.com/n0tl3ss · nmikic.rs

Professional Summary

Software engineer with 8+ years building backend services, frameworks and cloud integrations in Java, Python and Go. At Oracle since 2022 (IC4), contributing to OpenTelemetry, Micronaut Data vector search, OCI/AWS integrations, Kubernetes workload identity and GraalPy. Four years working asynchronously across Europe and the US in a distributed open-source team. Author of official Micronaut Guides. Acknowledged by Apple for web server security (November 2025); verified in Anthropic's Cyber Verification Program (Defense Access, October 2026).

Core Skills

Languages: Java, Python, Go, SQL

Backend: Micronaut, Netty, GraalVM native image, GraalPy, REST and gRPC APIs, microservices, JDBC, R2DBC, Hibernate

Cloud and DevOps: Oracle Cloud (OCI), AWS, GCP, Kubernetes, Docker, Terraform, CI/CD (GitHub Actions, GitLab CI), Gradle, Maven

Observability and data: OpenTelemetry, Micrometer, Prometheus, CloudWatch, PostgreSQL, MySQL, Oracle DB, MongoDB, vector search

Security: Application security, penetration testing, OAuth2, OIDC, SSO, MFA/TOTP, HashiCorp Vault, TLS

Experience

Oracle — Software Engineer (IC4)

January 2022 – Present

IC4 since June 2024; IC3 from January 2022 to May 2024 · Belgrade

- Authored 400+ merged pull requests across the Micronaut ecosystem, reviewed 200+ pull requests from other contributors, and published releases for Micronaut SQL, Data, Tracing and Oracle Cloud.
- Designed and shipped Micronaut's OpenTelemetry integration (HTTP, gRPC, JDBC, R2DBC) and the Micrometer Observation and Prometheus PushGateway modules, merged into the official micronaut-projects repositories with tests and documentation.
- Delivered Micronaut Data vector search end to end: dense and sparse vector types, derived similarity queries, schema and index generation, and JDBC/R2DBC bindings for Oracle Database, PostgreSQL (pgvector) and MySQL HeatWave.
- Built the OCI integrations for logging, certificate management and OKE Kubernetes workload identity, and the AWS CloudWatch logging module; fixed OCI SDK retry back-off that could block Netty event loops and stall server I/O.
- Extended an internal Java service framework with metrics, HTTP/JVM instrumentation and request-ID propagation, and wrote its Terraform reference deployments.
- Improved Python/Java interoperability in Micronaut through GraalPy, including coroutine adaptation and dataclass introspection; contributed upstream GraalVM build-tool fixes and OpenTelemetry native-image metadata.
- Built Graal Development Kit application and Kubernetes generation for AWS, OCI and GCP, and GitLab CI tooling for automated dependency updates, releases, smoke tests and OCI authentication.
- Authored five official Micronaut Guides and co-authored a sixth (Kubernetes on OKE, EKS and GKE; metrics on CloudWatch and OCI; OpenTelemetry tracing on OCI), each with a runnable, tested application.

Seven Bridges Genomics — Penetration Tester

May 2021 – Dec 2021

- Moved to the security team to test the platform I had helped build: web and API penetration testing, authentication and authorization reviews, and remediation guidance for the Core Team.

Seven Bridges Genomics — Software Engineer, Core Team

Dec 2017 – May 2021

- Built platform services in Java, Python and Go, including shared secrets management with HashiCorp Vault and MFA with recovery codes, email verification and TOTP.
- Split a monolithic billing service into separate charging and pricing services in Java, improved OAuth2 single sign-on, and built the administrative billing API gateway and Go HTTP clients.
- Automated shutdown of idle AWS EC2 test environments and built a notification service for targeted and platform-wide messages (Go, MongoDB).

Seven Bridges Genomics — Python Software Engineer Intern

Mar 2017 – Jun 2017

- Built a Python user management service for registration and authentication, plus a frontend API gateway with Tornado, SQLAlchemy and PostgreSQL.

Education

MSc in Software Engineering — University of Belgrade, School of Electrical Engineering — Oct 2017 – Sep 2019

BSc in Software Engineering — University of Belgrade, School of Electrical Engineering — Oct 2013 – Sep 2017

Languages: Serbian (native), English (professional working proficiency)
