Nemanja Mikić

Senior Software Engineer · Backend, Platform & Cloud · Java, Python, Go · Remote-ready (CET)

Belgrade, Serbia · n0t_l3ss@outlook.com · linkedin.com/in/nrmikic · github.com/n0tl3ss · nmikic.rs

Professional Summary

Software engineer with 8+ years building backend services and developer frameworks in Java, Python and Go. At Oracle since January 2022, promoted to IC4 in June 2024, delivering Micronaut observability, vector search and cloud integrations. Four years of asynchronous collaboration across Europe and the US.

Core Skills

Languages: Java, Python, Go, SQL
Backend and data: Micronaut, Netty, GraalVM/GraalPy, REST, gRPC, PostgreSQL, Oracle DB, MongoDB
Cloud and delivery: OCI, AWS, GCP, Kubernetes, Docker, Terraform, Gradle, Maven, CI/CD
Observability and security: OpenTelemetry, Micrometer, Prometheus, OAuth2/OIDC, Vault, application security

Experience

Oracle — Software Engineer (IC4)

Jan 2022 – Present

IC4 since June 2024; IC3 from January 2022 to May 2024 · Belgrade

- Shipped Micronaut OpenTelemetry tracing for HTTP, gRPC, JDBC and R2DBC, plus Micrometer Observation and Prometheus PushGateway integrations, with tests and documentation.
- Delivered Micronaut Data vector search with AI assistance: vector types, similarity queries and schema generation; JDBC support for Oracle, PostgreSQL and MySQL HeatWave, and R2DBC support for Oracle and PostgreSQL.
- Built OKE workload identity, OCI certificate management and cloud logging integrations. Fixed OCI retry back-off that could block Netty event loops and stall server I/O.
- Contributed fully AI-generated GraalPy dataclass introspection; added coroutine adaptation for Python/Java interoperability; extended Graal Development Kit application and Kubernetes generation across AWS, OCI and GCP.
- Contributed 400+ merged Micronaut PRs (including AI-assisted and AI-generated work), reviewed 200+ PRs and published module releases. Authored five official Micronaut Guides and co-authored a sixth, each with a runnable, tested application.

Seven Bridges Genomics — Penetration Tester

May 2021 – Dec 2021

- Moved to the security team to test the platform I had helped build: web and API penetration testing, authentication and authorization reviews, and remediation guidance for the Core Team.

Seven Bridges Genomics — Software Engineer, Core Team

Dec 2017 – May 2021

- Built platform services in Java, Python and Go, including shared secrets management with HashiCorp Vault and MFA with recovery codes, email verification and TOTP.
- Split a monolithic billing service into separate charging and pricing services in Java, improved OAuth2 single sign-on, and built the administrative billing API gateway and Go HTTP clients.
- Automated shutdown of idle AWS EC2 test environments and built a notification service for targeted and platform-wide messages (Go, MongoDB).

Seven Bridges Genomics — Python Software Engineer Intern

Mar 2017 – Jun 2017

- Built a Python user management service for registration and authentication, plus a frontend API gateway with Tornado, SQLAlchemy and PostgreSQL.

Education

MSc in Software Engineering — University of Belgrade, School of Electrical Engineering — Oct 2017 – Sep 2019

BSc in Software Engineering — University of Belgrade, School of Electrical Engineering — Oct 2013 – Sep 2017

Languages: Serbian (native), English (professional working proficiency)

Recognition

- Credited in Apple's web server security acknowledgements (November 2025).
- Anthropic Cyber Verification Program, Defense Access tier (October 2026).
